

Tableau-to-Excel Coverage

How each Tableau visual type now converts to Excel in the dashboard export extension, what it did before this work, and how the extension recognises the visual from the workbook.

38 target visual types

Every type now gets an explicit strategy. Before, 13 of them came out partly wrong, broken, or failed to a table.

Strategies, strongest first

A correct table beats a chart that only looks similar: a visual becomes an Excel chart only when the chart keeps its meaning.

NATIVE

A genuine Excel equivalent: a chart type or formatted cells.

CONSTRUCTED

Excel has no such chart, so it is built from Excel parts that keep the meaning.

APPROXIMATE

Excel's closest chart keeps the meaning; the visible difference is named in the report.

TABLE_FALLBACK

No Excel chart would read correctly, so the visual's data is exported as a table with a note.

IMAGE_FALLBACK

A Tableau-rendered picture, with its data on a Visual Data sheet.

Coverage matrix

Each export also carries this information per visual on its own Conversion Report sheet.

A TABLEAU VISUAL	B BEFORE	C NOW	D EXCEL OUTPUT	E FIDELITY	F RECOGNISED BY
BARS AND COLUMNS					
Bar	● Native	NATIVE	Clustered bar chart	High	bar mark, measure on Columns
Column	● Native	NATIVE	Clustered column chart	High	bar mark, measure on Rows
Stacked Bar	● Native	NATIVE	Stacked bar chart	High	dimension on Color, not on the category shelf
Stacked Column	● Native	NATIVE	Stacked column chart	High	dimension on Color, not on the category shelf
Grouped Bar	● Native	NATIVE	Clustered bars grouped by the outer field	High	Color is the innermost category field
Histogram	● Continuous bins read as a scatter	CONSTRUCTED	Tableau's own bins as touching columns	High	a (bin) field on the category axis
Bullet	● Target dropped	CONSTRUCTED	Bars plus a target tick per category	High	per-cell reference line from another field
Lollipop	● Dots dropped	CONSTRUCTED	Thin bars with a dot at each end	High	bar and circle cards on one measure
Population Pyramid	● Table of internal IDs	CONSTRUCTED	Back-to-back bars, minus signs hidden	High	a negated measure or a reversed axis
Funnel	● Constructed	CONSTRUCTED	Centred stacked bars on a hidden offset	High	one category per stage measure
Waterfall	● Constructed	CONSTRUCTED	Stacked columns on a hidden running base	High	Gantt bars on a running total
Gantt	● Constructed	CONSTRUCTED	Stacked bars with hidden gaps on a date axis	High	Gantt bar mark, Size as the duration
Pareto	● Cumulative line missing	NATIVE	Columns plus a cumulative % line on a secondary axis	High	running % of total on a folded second axis

A TABLEAU VISUAL	B BEFORE	C NOW	D EXCEL OUTPUT	E FIDELITY	F RECOGNISED BY
LINES AND AREAS					
Line	● Native	NATIVE	Line chart	High	line mark over a date or dimension
Multi-Line	● Detail lines summed into one	NATIVE	One series per member, in its colour	High	a Detail or Label field that splits the marks
Area	● Native	NATIVE	Area chart	High	area mark
Stacked Area	● Native	NATIVE	Stacked area chart	High	area mark, dimension on Color
100% Stacked Area	● Failed to a table	NATIVE	100% stacked area (bars too)	High	% of Total that fills each category
Slope Chart	● All members summed into one line	NATIVE	A line per member, with markers	High	two periods, a Label or Detail field per line
Bump Chart	● Rank not found, axis not reversed	NATIVE	A line per member, rank 1 at the top	High	rank table calculation, reverse='true'
Dual Axis	● Two stacked charts	NATIVE	One chart: secondary axis, or one scale when synchronized	High	fold='true' and synchronized on the axis
Combo	● Native	NATIVE	Combo chart: bar + line, area + line	High	a different mark per axis
PARTS OF A WHOLE					
Pie	● Native	NATIVE	Pie chart with Tableau's labels and hover text	High	pie mark, Angle and Color
Donut	● Native	NATIVE	Doughnut chart with the hole's text	High	two pie layers on MIN(0) axes
Treemap	● Native	NATIVE	Treemap (Excel 2016 and later)	High	square mark, empty shelves, Size
Packed Bubble	● Approximate	APPROXIMATE	Bubble chart, packed, with labels and hover text	Medium	circle mark, empty shelves, Size
SCATTER AND DISTRIBUTIONS					
Scatter	● Native	NATIVE	Scatter chart	High	a measure on both axes

A TABLEAU VISUAL	B BEFORE	C NOW	D EXCEL OUTPUT	E FIDELITY	F RECOGNISED BY
Bubble	● Size dropped	NATIVE	Bubble chart, bubble area from Size	High	measures on both axes and a Size measure
Box Plot	● Constructed	CONSTRUCTED	Tableau's quartiles, whiskers and median	High	box plot reference distribution
TABLES AND HEAT MAPS					
Text Table	● Native	NATIVE	Formatted cells	High	text marks
Heat Map	● Values lost	CONSTRUCTED	Matrix with Tableau's colour in each cell	High	dimensions on Rows and Columns, a measure on Color
Highlight Table	● One row per mark	CONSTRUCTED	Matrix of values coloured by Tableau's scale	High	as a heat map, with the value on Text
MAPS					
Filled Map	● Table	TABLE_FALLBACK	Data table of the marks, with a note	Exact data	filled polygons, geometry encoding
Symbol Map	● Table	TABLE_FALLBACK	Data table of the marks, with a note	Exact data	circles on generated latitude and longitude
Density Map	● Table	TABLE_FALLBACK	Data table of the marks, with a note	Exact data	density marks
Polygon Map	● Table	TABLE_FALLBACK	Data table of the marks, with a note	Exact data	custom polygon marks
Flow Map	● Table	TABLE_FALLBACK	Data table of the marks, with a note	Exact data	line marks with a Path on a map
Map with Layers	● Table	TABLE_FALLBACK	Data table of the marks, with a note	Exact data	several mark layers on one map

Also recognised

Variants found in the test dashboards beyond the 38 types.

Dumbbell Both values as dots joined by a line, horizontal kept	CONSTRUCTED	Dot plot Every mark a dot over its category band	CONSTRUCTED
Calendar heat map Weeks by weekdays, the day in each cell	CONSTRUCTED	KPI indicator grid Each cell shows its shape field's value	CONSTRUCTED
Rounded bars Bar chart; Tableau's round caps left out	NATIVE	Bar in bar Narrow bars in front of wide ones on two axes	NATIVE
Progress bar The progress over its 100% track, on one scale	NATIVE	Sparklines and small multiples Lines break between panes, as in Tableau	NATIVE
Circle timeline Every column exported; before, the values were lost	TABLE_FALLBACK	Donut built on map layers No geography, so Excel cannot stack the layers	TABLE_FALLBACK
Viz extension Drawn by third-party code with no Excel equivalent	TABLE_FALLBACK	Chart Excel cannot draw Tableau-rendered picture plus its data	IMAGE_FALLBACK

Known limits

- Calculated fields, LOD expressions and table calculations arrive as Tableau's computed values. Formulas are not translated into Excel formulas; the report lists each calculation and its kind.
- Maps of every kind are exported as tables of their marks. Excel's map charts cannot reproduce Tableau's geography, layers or colour scales reliably.
- Filters and parameters apply as they were at export time, and the report lists them. Excel has no live link back to Tableau.
- Tooltips appear on hover for pies, donuts and packed bubbles only; elsewhere their fields are in the data.
- The picture fallback needs Tableau's image API, so the offline test harness could not exercise it end to end.
- The report is written before the charts are added to the file. If adding them fails, the panel shows the warning but the report does not.

Verified offline on 41 test dashboards in two fixture variants: 82 exports, no errors, all opened in Excel. Before and after outputs were compared for every change. A run in Tableau Desktop is still the next check.
